

Background Bullet Points

Marguerite Butler

9/6/23

Design Project Background Bullet Points. Due Sept. 13.

Assemble your background info to begin your analysis (below).

Use the library and the Web to find general information about your animal. Get help from us and/or the librarians. Look through the Design 1 assignment (posted later today) and gather all necessary information to start your analysis. This report will be about your animal's metabolism and heat balance, which you will present in a talk and write up a short paper.

Instead of an introduction, I want you to bullet-point the key background elements and end with a statement of purpose. You will want to cover relevant questions such as:

- What kind of animal was it? What did it look like? (Please draw the figures yourself, it is part of the learning process).
- Include any info that you find particularly interesting about the animal.
- Where did it live? General environment? (think metabolism and heat balance, so climate, humidity, temperature.
- What was the range of ambient temperatures in which it lived, etc.)
- Did it seek cover for shade or hiding places (think how it might impact heat balance and activity)?
- Was it an active animal? How did it obtain food?
- What other sorts of animals and plants lived at the same time?

For the sake of completeness, please organize your info into categories such as

- **general morphology and physical description,**
- **phylogeny and closest living relatives,**
- **time period and range,**

- **habitat, climate, and thermal biology,**
- **lifestyle and behavior** (such as foraging mode, locomotor strategy, social behavior, etc.)

Start with your Library Books, but continue the search using journal articles, online reviews, and books borrowed through interlibrary loan. [[Library Day](#)]
